# Box Project - Integrated Mathematics I <br> Similar Figures <br> SUBMIT THIS SHEET WITH YOUR PROJECT 

Name: $\qquad$ Per: $\qquad$

## STEP \# 1. Registration and Approval

Choose a box in the shape of a rectangular prism that has a volume less than 1000 cm 3 . All sides must be enclosed and it must have lettering or logos on at least one side. You must get your box approved before you begin your project. When you register your box, you will also select a scale factor by rolling a die. If you roll a 1 , you must roll again. If your original box is less than 100 cm 3 in volume, roll 2 die (dice). This scale factor will be used to build a similar model. You must have accurate dimensions of your box (in cm ) when you register it.

STEP \# 1 DUE DATE:
Scale Factor $\qquad$ BOX 5 points $\qquad$

## STEP \# 2. Blueprints

Draw a two dimensional "blueprint" for both the original box and the model. The original must be drawn the actual dimensions and the model must be drawn to scale. This will be on two different sheets of paper. Drawings must be done with a straight edge and accurately labeled.

Original Model

- Blueprints

Grid Lines
Quality, Neatness

Scaling is Accurate

- Calculations for surface area, volume and ratios
*Show formulas and all work.
**See Table on the back of this sheet for the format of the calculations.
***This Table will be attached to the back of the Final Box.
Scale Factor (SF)
(SF) ___ 1
Length/Width/Height
Surface Area
Volume

| 13 |  |
| ---: | :--- |
| - | 14 |
| - | 14 |
| $-\quad / 4$ |  |

Ratios
(a) Ratio of Original/Model for side Lengths $\qquad$
(b) Ratio of the calculations of the Surface Areas of the original to the model
(c) Ratio of the calculations of the Volumes of the original to the model
$\qquad$

## STEP \# 3. Final Construction

Construct/Build a scale model of your object using your scale factor. You should pay attention not only to the size, but shape, colors, textures, materials, package labels, etc. Use materials that will result in a model that is sturdy when finished. Any lettering and/or logos are to be scaled proportionally. At least one face of the original must be transferred to the model that you build.

| Grids on Both Boxes | /6 |
| :---: | :---: |
| Scaling of Model is Accurate | /9 |
| - Sturdy Model | /5 |
| - Neat and Creative (Color) | /5 |

$\qquad$ 25 points $\qquad$
