

Mathematical Wordtris

A Puzzle by David Pleacher

In this puzzle, you are to place the 17 tetris tiles on the next page into the 7 x 10 grid below in the usual interlocking style, so that ten 7-letter math words are formed reading left to right. The 17 tiles will take up 68 of the 70 spaces, so the letters V and X have been placed for you. You are also given three of the ten words to help you get started: HEXAGON, ELLIPSE, and SEVENTY.
